

Solving a decimal word problem using a two-step linear inequality

Charmaine is going to rent a truck for one day. There are two companies she can choose from, and they have the following prices.

- Company A charges \$69 and allows unlimited mileage.
- Company B has an initial fee of \$55 and charges an additional \$0.70 for every mile driven.

For what mileages will Company A charge less than Company B?
Use m for the number of miles driven, and solve your inequality for m .

≥

×

↺

$A = 69$

$B = 55 + 0.70m$

$69 < 55 + 0.70m$

$-55 \quad -55$

$14 < 0.70m$

$\frac{14}{0.70} \quad \frac{0.70m}{0.70}$

$20 < m$

$m > 20$
